SINHA 2012-05-09. File Robert Treybal Solution Book Metadata.Hitherto, resins have been used for a variety of purposes and in all kinds of shapes. In particular, resins have been used as forming materials that constitute electric and electronic materials, including OA equipment, communications equipment, video equipment, personal computers, digital appliances, and mobile telephones. In particular, the electric and electronic fields have been developing and diversifying at a high-speed. Therefore, with such changes, demands for those resins have been increasing. Conventionally, as such resins, for example, polyolefin resins have been used, but, for some special applications, glass fibers may be added to the resins. In particular, the following Patent Document 1 discloses a resin composition using as a resin, a blend of a polyarylene sulfide and a styrene resin, which resin composition is used for forming, for example, a metal plate that constitutes an external casing of an electric and electronic device, which external casing is used for constituting an opening section of a housing and a casing surrounding the external casing. This resin composition is excellent in curling resistance and heat resistance. In addition, in recent years, consideration has been given to using, instead of the above glass fibers, polyethylene terephthalate fibers and polybutylene terephthalate fibers. For example, Patent Document 2 discloses a terephthalate fiber-containing f30f4ceada
