**AutoCAD Crack Incl Product Key Download [2022]**

How does the world's most recognized CAD program work? The first step in creating a 2D or 3D drawing is setting up the project, or starting a new drawing. The AutoCAD User Interface

---

(UI) is logically divided into three main components: the ribbon, the drawing canvas and the status bar. The ribbon provides shortcuts for features that will be used often. The drawings created using AutoCAD are typically composed of many drawing objects and the ribbon enables

---

you to access all these objects in one place. The drawing canvas is the area where the user creates the drawing objects. There are two types of viewports - Schematic and Drafting, which are discussed below. The user can choose any of the views. If you are currently in Schematic viewport then

---

you will see the dimension line of the drawing (top line in the image above). If you are currently in Drafting viewport, then you will see the drawing's footprint (bottom line in the image above). The status bar is located at the top and is divided into several main components - 1. Menu

---

Bar: The Menu Bar is used to display all the toolbars, menus and dockable windows. The location of these items can be customized in the Preferences window. 2. Title Bar: This is located below the Menu Bar and provides an indicator to the top of the next view. It is also used to display settings information and

---

to display a tool tip when you hover the cursor on the Title Bar. 3.

Application Bar: This is also located below the Menu Bar and displays information regarding the drawing and any information that is relevant to the tool you are using. The information displayed here includes; FileName,

---

Progress, Dimensions, Views and Grid. 4. Help Bar: Located below the Application Bar, the help bar provides support to the user. It includes the AutoCAD Help system. 5. Last item is the Title Bar (Tabs) The Title Bar is further divided into four components - 1. Title: It displays the file name and the current status of

---

the drawing (Draft, Clean, etc.)

2. Dock List: This component displays the toolbars that are currently dockable and they can be expanded or collapsed.

2. Toolbar: The Toolbars are used to display items that are accessible with a mouse click. The toolbars contain the following sub-items
