Use of AutoCAD has fallen steeply since the release of AutoCAD 2007, with many users migrating to rival products. There have been limited releases of AutoCAD since 2008. Unlike commercial CAD software, AutoCAD's source code is available for free, under the GNU General Public

License. Its development was continued after the release of AutoCAD 2002. A number of companies provide a "licencing" service for AutoCAD called Autodesk Exchange (formerly AutoCAD Exchange) for users who are not interested in developing their own add-ons. Operating systems AutoCAD's direct

predecessor was not developed for any operating system. It was developed for the Macintosh, and the first version shipped in 1991. AutoCAD was ported to Windows in 1997, and on macOS starting with AutoCAD 2007. Windows 95 compatibility was not supported; only Windows NT/2000,

XP and later is supported. The first version of AutoCAD for Windows was called the WindowBuilder, released in 1997. Since then, AutoCAD has shipped both as a 32-bit and 64-bit application. These applications are the basis for AutoCAD LT (for 32-bit Windows) and AutoCAD LT for

64-bit Windows. A version for Mac OS X is based on the same code as the MacOS X version of AutoCAD LT. In contrast, the command-line based AutoCAD LT for Windows is a separate product with its own command-line interface. Also, the API is different. AutoCAD LT is not a native 64-bit

Windows version and is only available as a 32-bit program. The Windows version of AutoCAD uses DirectDraw for rendering. In 2001, it was replaced by OpenGL (and this rendering technology in AutoCAD is now generally referred to as "Direct3D"). AutoCAD 2016 and later used Direct3D for rendering, with

some limitations. Windows versions of AutoCAD are not shipped with Raster Graphics functions. AutoCAD LT can be installed separately and has Raster Graphics functions. AutoCAD is not compatible with some Windows APIs, such as DirectX 9 and DirectX 10. However, there are third-party solutions to work around this,

for example
autocad cxai. In
AutoCAD 2012,
some more features
are available in

Beverage industry leaders are urging consumers to help end a 15-month-old boycott of Poland Spring Water with $1.5 billion in estimated sales. The official launch of a petition

sponsored by the American Beverage Association, the National Beer Wholesalers Association, and the Partnership for a Healthy American Diet was held today in Atlanta. The goal is to have 100,000 signatures on the petition, which urges consumers to once again support Poland Spring and to let their local

representatives know they want to keep the boycott going. "We are extremely excited to be able to address the issue that has caused tens of millions of consumers to make a choice not to drink Poland Spring for the past 15 months," said Polands Spring Water's president and CEO, Paul

McAnelly. "We look forward to our return to the retail shelves of America. "The collaboration with these beverage industry leaders on this issue is a significant step forward in helping to end the boycott," he continued. "We hope this petition will generate more consumer support for our company, and that it will put

the consumer back in the driver's seat." The petition will also be delivered to the Senate and House of Representatives, as well as to all state legislators. "I commend the American Beverage Association and the beverage industry leaders for the collective effort that is taking place to assist a corporation

that has been targeted by consumers for not being the supplier of choice in the marketplace," said U.S. Senator Tom Harkin, D-Iowa. "To all of those who made the decision not to purchase Poland Spring, we are hopeful that you will continue to support companies that practice good corporate

citizenship." The American Beverage Association, which represents the nation's 100 largest beverage companies and is the nation's leading trade association for the soft drink, beer, and other beverage industries, filed a lawsuit earlier this year against Poland Spring and the National Advertising Division of the

tools to add or remove parts of the design. (video: 5:54 min.) Use the new Markup Assist tool to create basic markup files from scratch, rather than importing from scratch. New Dynamic Content: Using the brand new Dynamic Content feature in AutoCAD, you can add interactivity to your drawings to

show, for example, how parts of your drawings interact with each other. (video: 3:23 min.) Once created, Dynamic Content objects don't require any further editing; they're fully functional right from the get-go. AutoCAD's PDF/X Features: Use the PDF/X toolbox to print your own PDF files, which now

include the ability to maintain layer information, such as outline weight and color and apply a user-defined watermark to the PDF. (video: 6:14 min.) Speed up the overall process of getting a PDF print-ready document to the printer by creating a PDF in the same folder as your original drawing, rather

than as a separate file. (video: 3:23 min.) Use the new PDF/X Specifications feature in AutoCAD to export your PDF documents to a file that can be viewed or shared online. Command-Line Tools: Automate the creation of AutoCAD drawings with a command line script. View the markup history of any drawing in a

long list of all the markings made to it. Automate and modify existing drawings in a script. Automatically redraw a drawing after an element is edited using a command-line tool. New Layers Features: Use new layers features to add new sets of properties to layers or groups of layers, such as z-index,

visibility and outline color. Easily associate one or more layers with other types of layers, such as marking or AutoCAD commands. Add automatic shape layers to a drawing and use the new command-line tools to add line styles, point types, etc. New Features for Drawing-specific Features: Easy
