Steel Shell is a FPS. Your task is to shoot robot enemies, and find your way out of the funhouse, where you'll fight other robots, aliens and mutants with various weapons. It's a single-player third-person shooter, which keeps the elements of the popular genre such as cyberpunk aesthetic, destructible environment, etc. Update 2.2: Changes in Update 2.2: New weapons - AK-74, AL-9, Uzi, Revolver, FEL and the model of a CZ pistol from the book "Call of Cthulhu". New abilities for reloads, critical hits, better accuracy and the ability to walk and run at the same time. New events, cutscenes and bonus items - a new one player game mode, the possibility of jumping from the normal shooting and hacking game. This update does not affect the original game release. It is just more content, the game's way more friendly to new players. This is a book about the following mods for fps games: 1. Fg03-a Half-Life 3 mod, aka such-a-mods (by: GAGATCH aka Gagatch) 2. What's new:

The Atlantic Wall The Atlantic Wall was Hitler's last The Allies' attempts to thwart Operation Dragoon along the shores of the Mediterranean Sea were unsuccessful. On 8 August 1944, the United States, United Kingdom, and France invaded Italy. On 9 August, U.S. forces headed west into Austria, where they encountered hardened defenses. U.S. and UK forces crossed the Danube River at Regensburg on 9-11 August. On 11 August, the British Eighth Army captured the Essen Gap, between Vienna and Prague, and halted its advance into Czechoslovakia. Both the Americans and the British were unfamiliar with the terrain on the Western European continent, and the "cakewalk" that they perceived was anything but on the Eastern Front. Operation Dragoon was thus delayed for several weeks while supply lines were secured and many "psychological problems", such as mutual mistrust between American and British soldiers, were solved. The end of the "short interlude of respite" following the Allied invasions of Poland, France, and the Netherlands in World War I was approaching, and the Germans in western Europe were realizing that they were fighting on a losing streak. Churchill realized that while the U.S. might not be actively involved in the ground war on the continent, its air power would be helpful. The Fuehrer agreed to discuss building detractors in German-occupied Belgium. While a group of engineering machinists had infiltrated to help sketch out a plan, air battles raged throughout the late summer. German fighter aircraft faced the American Eighth Air Force (previously, the Ninth), which began bombarding from bases in Britain in early 1944. By the summer of 1944, Bomber Command's first year of operations, the average American bomber crew had dropped almost 500,000 tons of bombs. The Americans had proved to both themselves and the enemy that

bombers were a force to be reckoned with. In August, 6th Air Corps commander Maj. Gen. James H. Doolittle led 12 B-25 bombers into Tokyo and dropped bombs, causing great destruction in downtown Tokyo and threatening the Japanese Emperor's primary palace at Hirohito's compound in the Imperial Palace. At a subsequent North African mission, two B-26 Marauders dropped bombs on the Italian port of Bari, destroying warehouses and dock

Full control over your fate in Scythe. Steam group and Discord chat for instant help. Scythe uses a streamlined action-selection mechanism (no rounds or phases) to keep gameplay moving at a brisk pace and reduce downtime between turns. While there is plenty of direct conflict, there is no player elimination, nor can units be killed or destroyed. Every part of Scythe has an aspect of engine-building to it. Players can upgrade actions to become more efficient, build structures that improve their position on the map, enlist new recruits to enhance character abilities, activate mechs to deter opponents from invading, and expand their borders to reap greater types and quantities of resources. These engine-building aspects create a sense of momentum and progress throughout the game. The order in which players improve their engine adds to the unique feel of each game, even when playing one faction multiple times. Continue or load your previous game. 2.0 Errata: 2.1 NEI fix: 2.2 Fixed cases where you couldn't get into a war or full economic war 2.3 Fixed multiple typos (seen a few thousand times) 2.4 Fixed a few split vignettes 2.5 Fixed a issue where I mistook a lose for an unselected (potentially making it a draw) 2.6 Fixed a issue where you could not submit a claim on the board when you couldn't construct 2.7 Fixed an issue where you could not end the game. 2.8 Fixed a rare split vignette 2.9 Fixed some typos where the same vignette was duplicated onto two ends of the board 2.10 Fixed some rare typos in some dialog 2.11 Fixed an issue where some cards weren't stacked at their base 2.12 Fixed an issue where mechs in some cases did not log off from a war. 2.13 Disabled a few cards that had minor issues 2.14 Fixed a few draw triggers (if the draw is 3:3 it will be 3:3) 2.15 Fixed an issue where the upgrade tree was taking up too much space on your screen 2.16 Fixed a typo on the no upgrade no upgrade rule 2.17 Fixed an issue where you could not advance on the board when you couldn't upgrade. 2.18 Fixed an issue where you could not advance on the board when you had a militia. 2.19 Fixed an issue where the board sometimes had
