Thanks, John, I should have included a reference to the report. I'm afraid it will be awhile before I get around to that. In the meantime I am sending a reprint of the article to you, Jerry, Tom and Ed for comment and suggestions. Maybe there are some tricks of the trade we can learn from it. Will you be available on Thursday next week for lunch, or otherwise? Best, Jeff Bruno Gaillard@EES 04/25/2001 09:54 AM To: Jeff Dasovich/NA/Enron@Enron cc: Subject: Re: Special Request Sounds exciting. Can I have a copy of the article if it is available. I would like to show this to "my people" (non-technical). Jeff Dasovich Sent by: Jeff Dasovich 04/23/2001 06:35 PM To: Bruno Gaillard/SFO/EES@EES cc: Subject: Special Request Hi Bruno: I think you may be interested in an article that just appeared in the Journal of Risk and Uncertainty, published by Kluwer. The article is called "Regulatory Rules Governing Financial Engineering," by Steve Hopper and John Marks. It's a nice, well-written and thoughtful article. The basic point is that the rules governing derivatives are premised on the notion of "counterparty risk" -- meaning that A pays B, and vice-versa, and both sides are on the same side of the trade. But this assumption no longer applies to Enron. Hence, with Enron, the rules don't make sense. In other words, we can't rely on the rules the way we did in the past. (This also means that we're going to be much more likely to end up in front of the SEC and CFTC, if only because the rules won't make sense for us.) Anyway, I think you might find it thought-provoking. Best, Jeff[Low-dose oral roxithromycin does not suppress
