Added on Apr 18, 2013, size 5.88Mb. About The Movie Suicide Squad is a 2016 American superhero film based on the DC Comics supervillainÄ. Q: Why is this C-style function in C++ not legal? I know why a function with a default constructor in C++ is illegal (and this usually isn't the answer in a function where you don't actually have a default constructor defined, but that isn't the case here). void foo() { int x; ... } The line with int x; is an error. I know a function that takes no parameters and returns a value is generally legal (and has it's own options, see std::bind), but if the return type is void, why is it that when I do this: void foo() { int x; ... } I can't do this? A: From the standard (N3337): 4.1: A function with no parameters whose return type is not a class type is called a function, otherwise it is a function-like macro (7.1). 7.1: A function-like macro is defined in the same way as a function except that: — Its function-body is never implicitly executed. — Its enclosing function is not allowed to have an execution-time destructor (12.4). So, what you're attempting to do is not a valid C++ function - it's a function-like macro. When I'm making large batches of smoothies, I like to have this handy bag of nuts or peanuts on hand to add a great crunch to the end result. If you're ever in a pinch for nuts for a meal, the bag will always be a substitute that will never disappoint. There's no need for these bags to
